

Prevent Lost Profits with dual interval checkout weighing

Profits given away?

Can you legally sell items that weigh over 6kg? Do you know the minimum legal weight you can sell today on your current checkout scales? With Diva you can sell items weighing up to 15kg by weight instead of by unit. In addition, the minimum legal weight is only 40g instead of 100g for most 15kg scales – meaning you can sell more, and give away less.

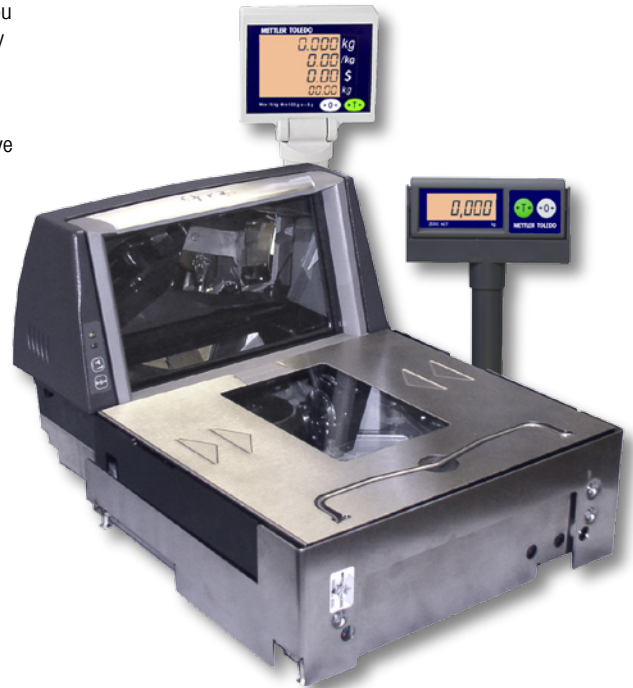

Durable Design

The Diva scale has been through rigorous testing to stand up to the punishment which is possible in the checkout lane. As the world's leading manufacturer of checkout scales, METTLER TOLEDO durability is legendary.

Globally Deployable

Diva has received weights and measures approvals for most major markets across the globe. Diva is capable of performing both price computing and weight only applications, making it easy for international retailers to globally standardize their checkout scale solution.

PSC Magellan 8200™ with Diva Scanning with Dual Interval Weighing

Diva enabled scanner scales are perfect for retailers who desire excellent scanning and weighing performance at checkout. Installation is simple with a built in leveling solution. To make life easy, sales and integration with the PSC Magellan 8200™ Scanner is handled completely by certified METTLER TOLEDO technicians.

Technical Data

PSC Diva Scanner Scale
